

RISE DTC · October 2026 edition

ChatGPT Ads Playbook.

Only 1.9% of ChatGPT headlines matched Google Search exactly in a ten-advertiser US sample. See how to plan your own ad, page and spending limit.

Backpack ad examples

▼ About the research in this playbook

What the report measured.

Graphite and Similarweb tracked ad reach, clicks, creative and landing pages. Here are the findings that affect what you write, which page you use and what you can afford to spend.

What was measured

Audience reach, ad clicks, advertiser activity, creative and landing pages. The report combines a user panel with separate ad and page datasets. Its PDF methodology lists 95,000+ ads from 500+ US advertisers, 70,000+ distinct creatives, 50,000+ headlines and 8,000+ classified landing pages.

What your store still needs

Your order economics, conversion measurement and a budget you can commit to a test. The report provides no DTC customer acquisition cost or profit benchmark.

Each chart covers the period and sample shown beside it. “Top” usually means the advertisers with the largest share of impressions. Sales and profit are outside that ranking.

Who sees an ad, and who clicks?

Start with the audience available to advertisers. Then examine how clicks vary by market and conversation position.

43.4% of eligible US users saw an ad.

The panel measures the share of ad-eligible users who saw at least one ad. Use that denominator when reading these percentages.

percent of eligible users who saw an ad

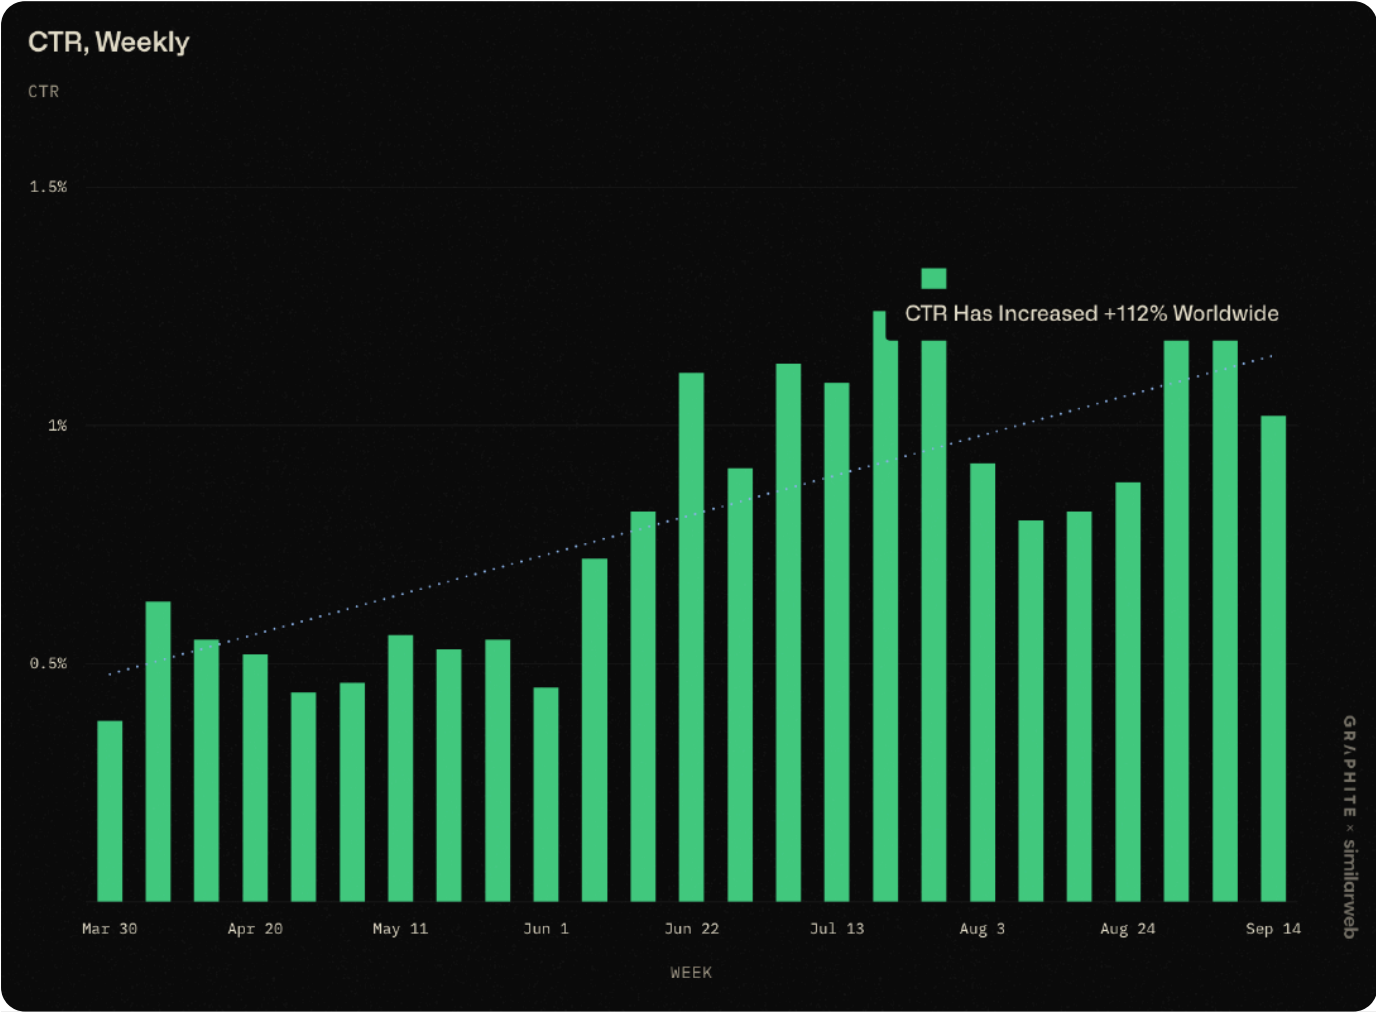

Nine markets · September 2026 [Graphite + Similarweb](#) · p. 8

FOR YOUR STORE

Check whether your target buyers are included in the market and audience you can reach. A platform-wide user count gives you a different denominator.

Worldwide CTR rose 112% over the reported period.

The report describes a 112% relative increase in worldwide weekly click-through rate over its observation window. The chart shows substantial weekly variation.

Worldwide · March 30 to September 20, 2026Graphite + Similarweb · p. 9

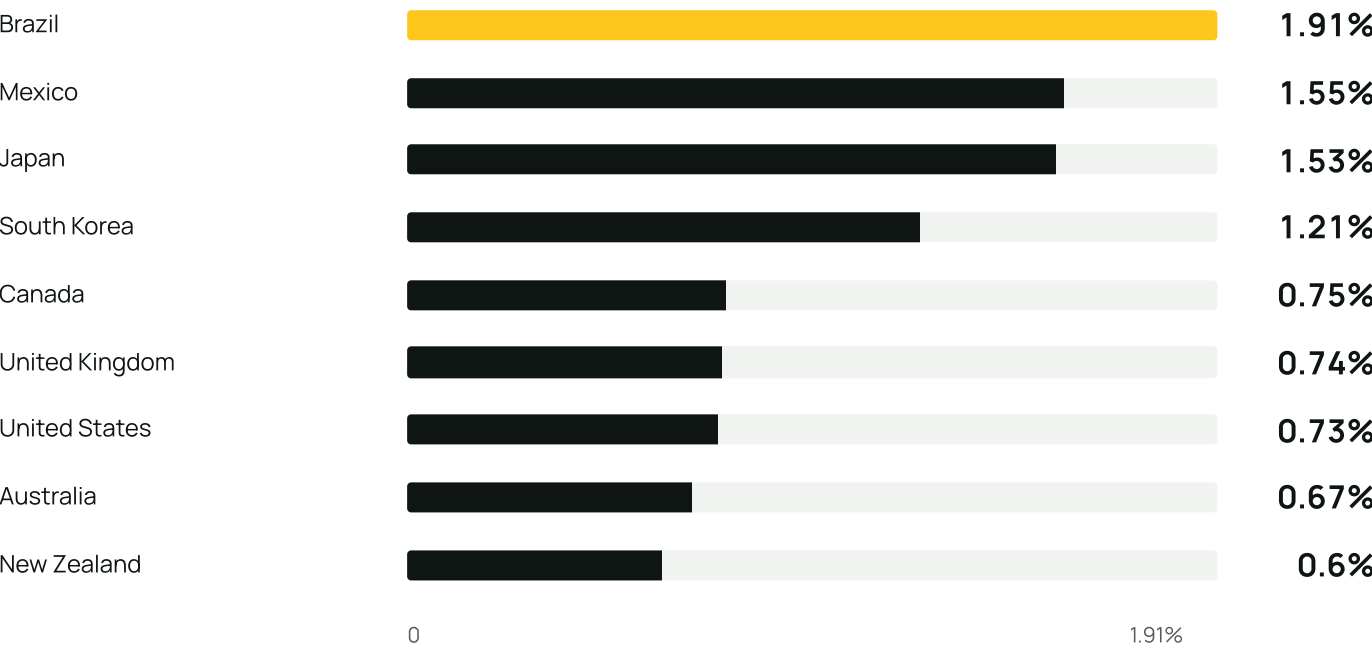

FOR YOUR STORE

Use your own click and order data together when reviewing the test. A higher click rate alone cannot tell you what those customers cost.

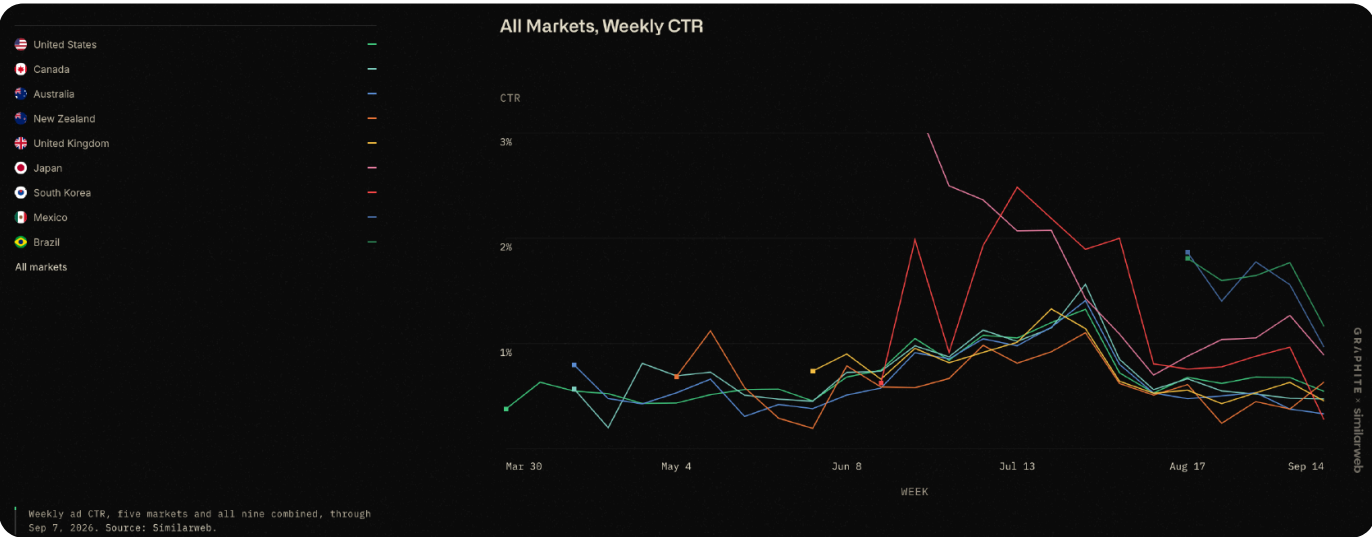

Markets have different click rates.

Compare the country averages with their observation periods in mind. Market rollout dates and audience composition can affect the comparison.

CTR percent

Nine markets · March 30 to September 16, 2026Graphite + Similarweb · p. 10

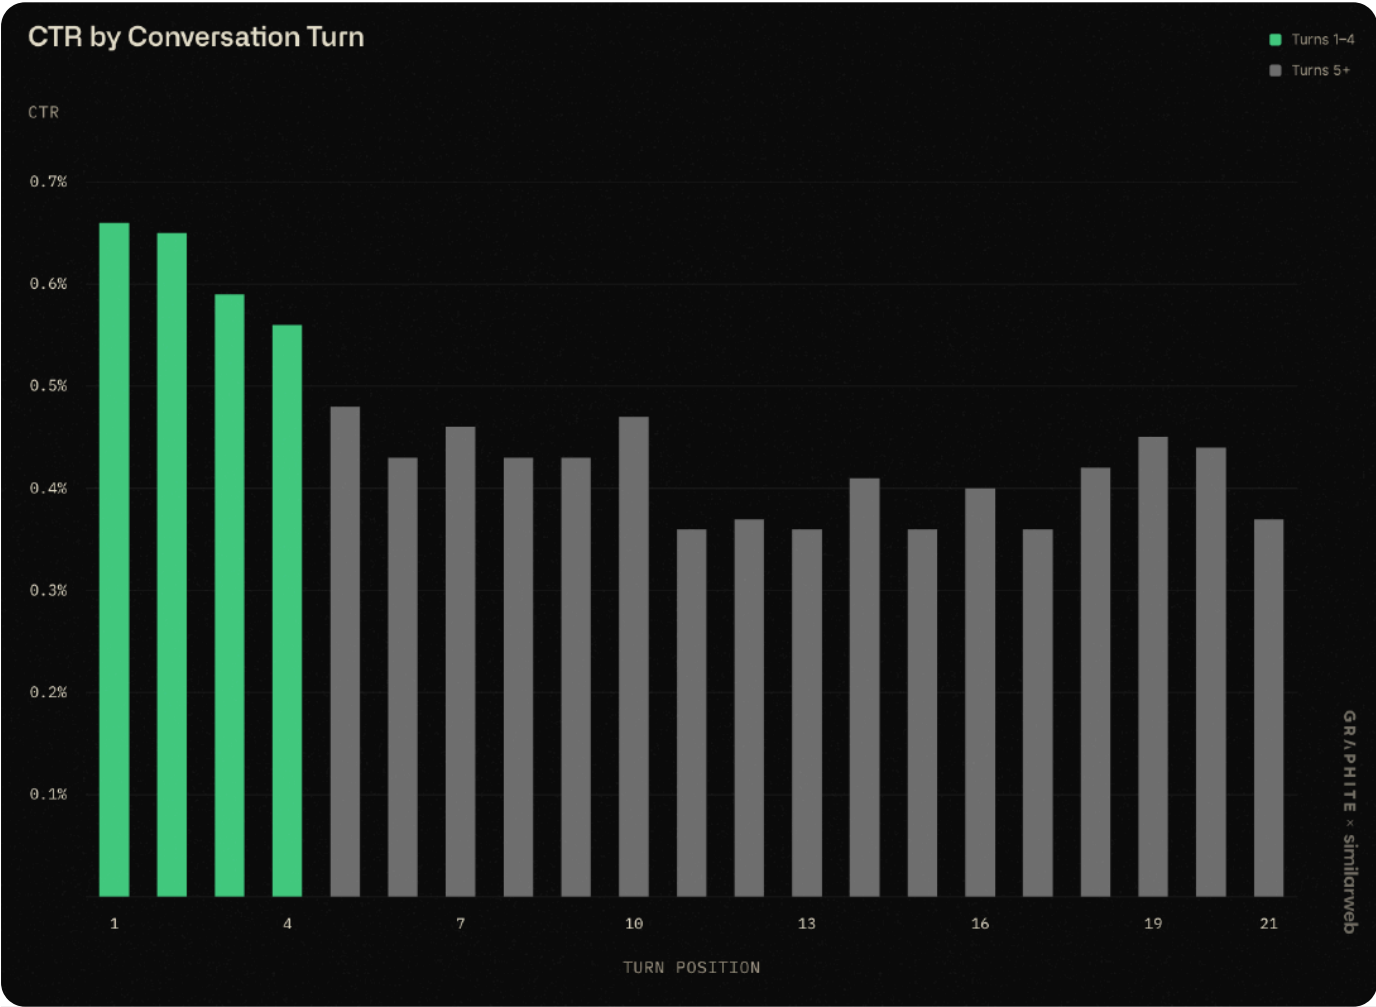

Nine markets, plus the combined series · Through September 2026; source date labels conflictGraphite + Similarweb · p. 11

FOR YOUR STORE

Choose a market you can serve well, with delivery, currency and returns information appropriate to that buyer. Treat country averages as context for your own measurement.

The first three exchanges drew 51% of impressions.

The report groups an exchange as a user message and its reply. It reports 48% higher CTR in the first four exchanges than in later ones. The first three exchanges account for 51% of impressions in the displayed bins.

percent of ad impressions

All countries · March 30 to August 23, 2026Graphite + Similarweb · p. 13

FOR YOUR STORE

Write an ad that makes the product and the relevant use clear. These observations do not establish that an advertiser can choose the exact conversation turn.

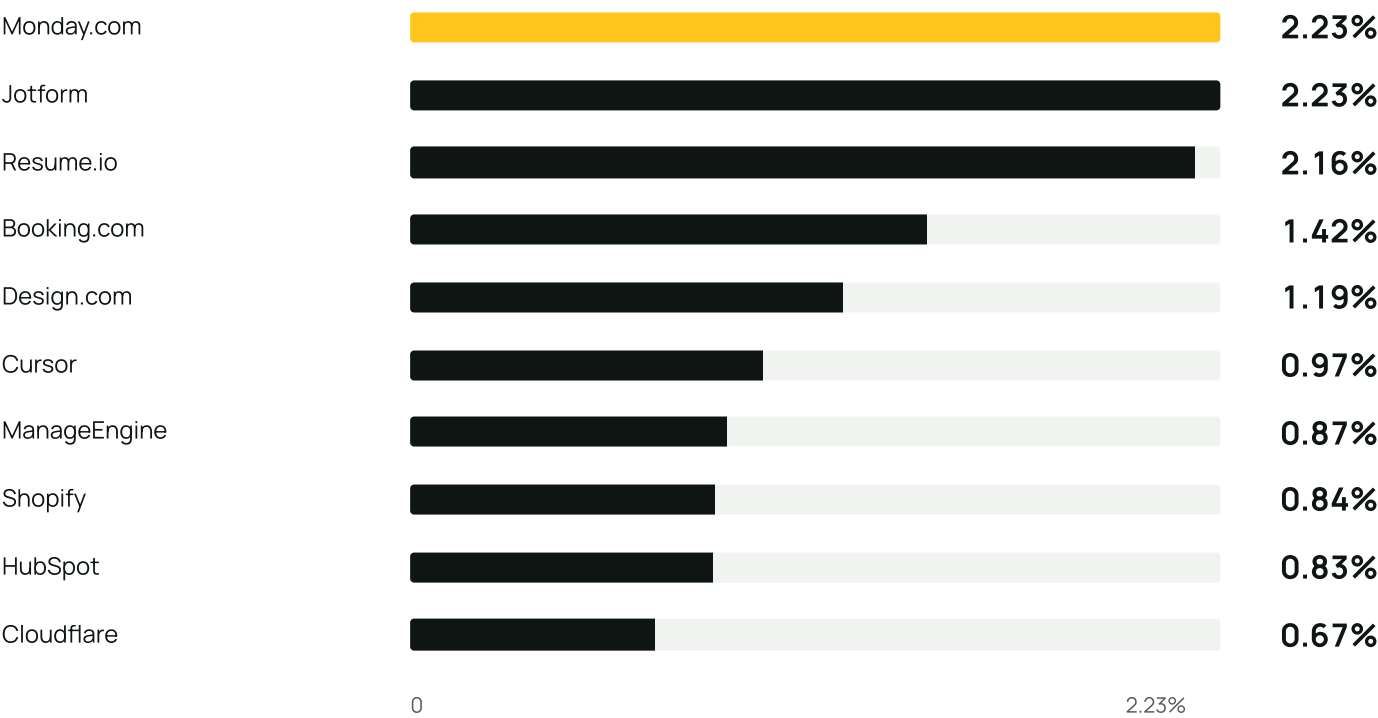

Who is buying, and how consistently?

See which advertisers appeared and how their activity changed.

The leading advertisers sell different products.

The report's leaders include software, travel and other offers that can be purchased online. Their impression shares describe exposure within the measured audience.

percent of impressions

Worldwide · May 4 to September 14, 2026, according to the footnote [Graphite + Similarweb · p. 14](#)

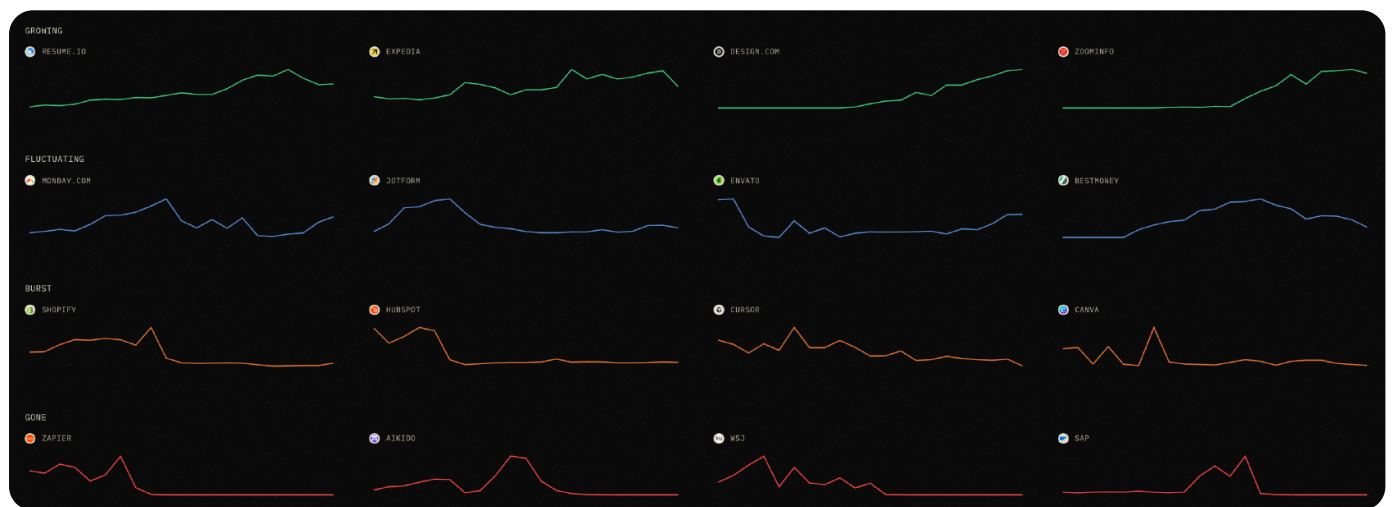

The chart labels these values as impression shares. The original footnote describes weeks in the top ten, leaving a conflict in the source labels.

FOR YOUR STORE

Make the product, price and purchase button easy to find on the page your ad opens. Check how many new customers complete an order.

Advertiser activity comes in different patterns.

Some brands increased activity, some fluctuated, and others appeared in short bursts. The report groups the observed patterns below.

US · March 30 to August 17, 2026 [Graphite + Similarweb](#) · p. 15

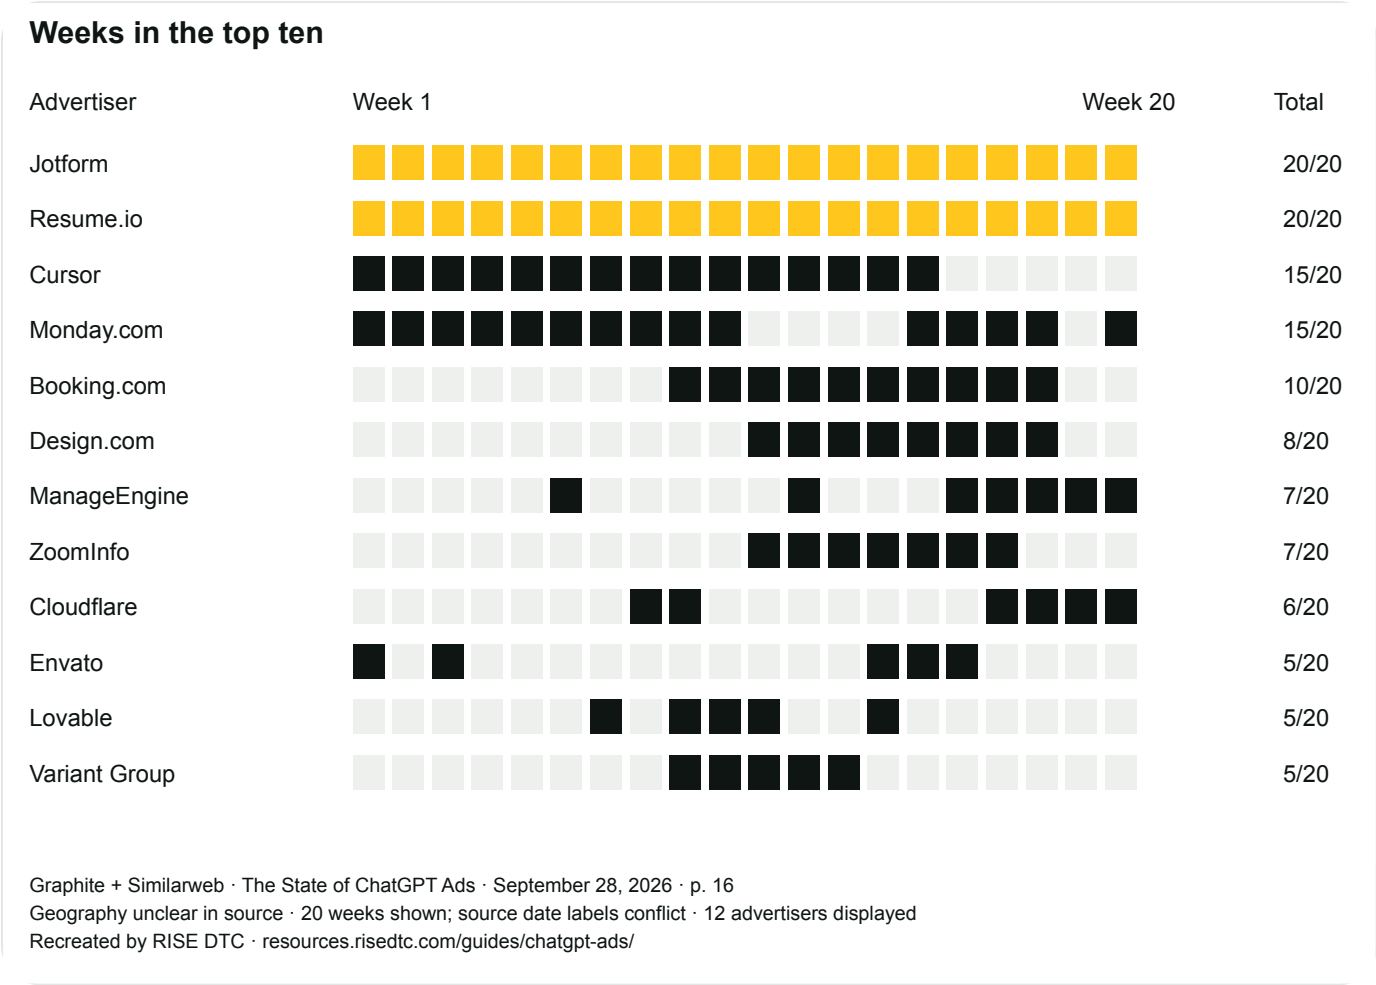

FOR YOUR STORE

Set a budget and a review date before launch. Another brand's burst of activity gives you no record of why it started or stopped.

A few advertisers held their position for longer.

The filled cells show weeks in which each advertiser appeared in the top ten. A row's total is a count of those weeks.

Scroll across to see all 20 weeks and the totals.

Geography unclear in source · 20 weeks shown; source date labels conflictGraphite + Similarweb · p. 16

The grid shows the report's 20-week sequence and totals. Its calendar dates and geography are unclear; the reading notes explain the conflicting source labels.

Retail and consumer brands took 10.4% of US impressions.

The report separates advertisers into categories and gives category-level impression shares. Its detailed rankings help locate examples closer to your product or sales process.

US · March 30 to August 4, 2026Graphite + Similarweb · p. 18

FOR YOUR STORE

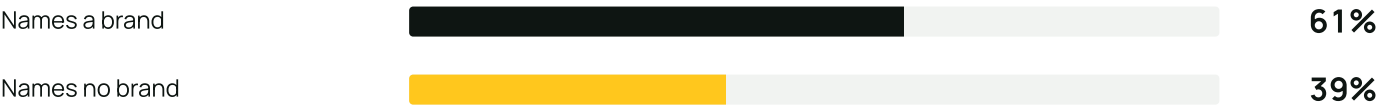

Use the retail and consumer-brand context when considering a DTC test. A software advertiser’s creative count does not set a production target for your store.

A brand mention can sit beside a competitor ad.

The report compares brand mentions in exchanges with and without ads. Its illustrated example shows an alternative service advertised beside a conversation about a named website builder.

percent of exchanges within each ad-presence group

Ad appeared

No ad appeared

FOR YOUR STORE

Keep competitive claims factual and specific. This observation establishes an association in the sample; it does not establish a dependable brand-targeting control.

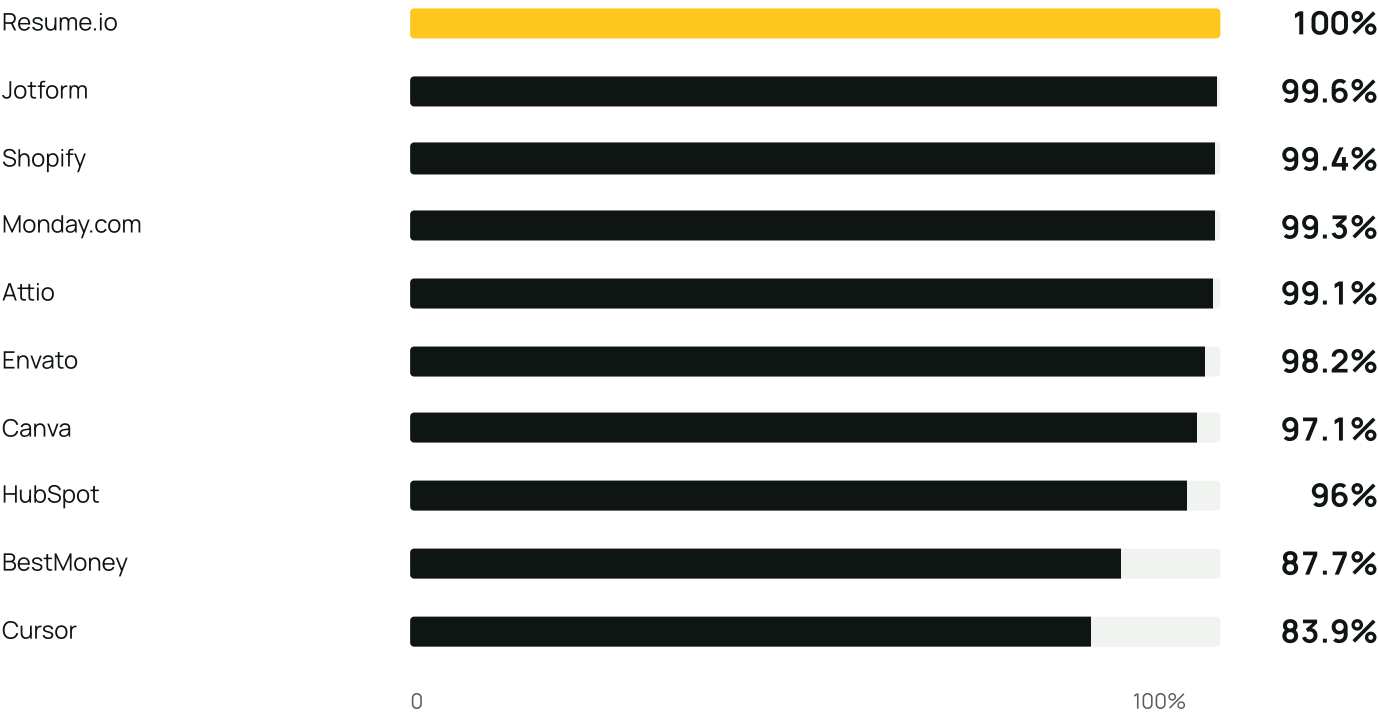

What do the ads look like?

The report shows how advertisers varied their wording.

Only 1.9% of headlines matched Google Search exactly.

In the ten-advertiser US sample, 1.9% of ChatGPT ad headlines exactly matched a paid-search headline.

Headlines without an exact Google Search match (%)

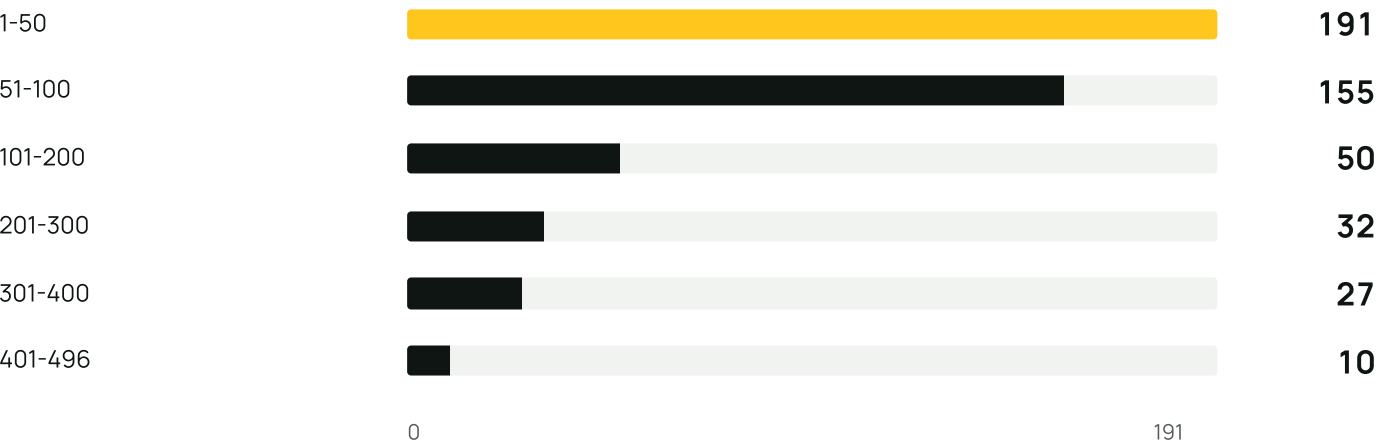

FOR YOUR STORE

Write a headline about how the buyer will use the product. Save it with the page URL so you can compare orders from each ad.

Higher-ranked advertisers had more distinct creative.

The chart groups advertisers by impression-share rank and compares the median number of distinct ads observed in each group.

median distinct ads per advertiser

US · April 1 to August 16, 2026Graphite + Similarweb · p. 22

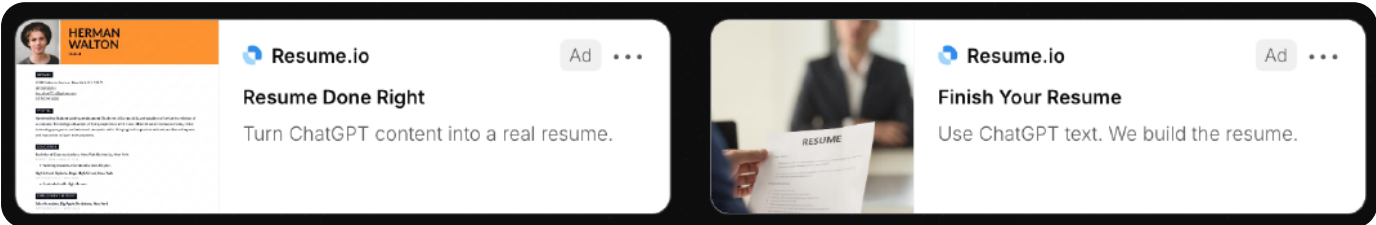

FOR YOUR STORE

Build enough variations to test your actual questions. Production volume is a cost; the relationship here does not show that creating more ads caused better results.

Resume.io sells a finished resume. Jotform names

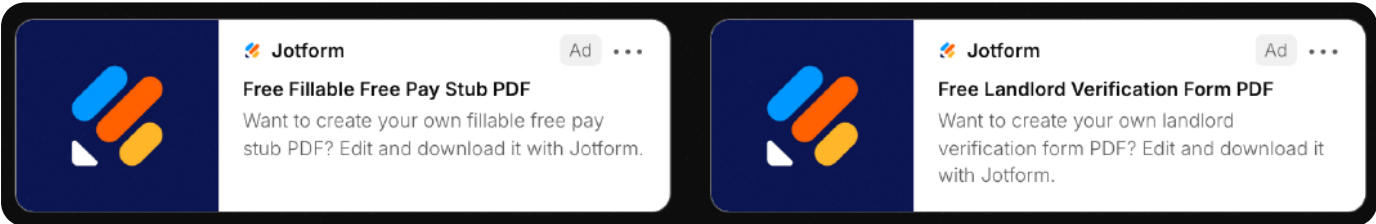

the document.

Resume.io's examples address resume completion and document formatting. Jotform's examples name particular forms and documents. Each ad names something the buyer wants to finish.

Resume.io shows several variations around completing a resume, formatting it and creating a matching cover letter.

FOR YOUR STORE

A commuter needs to check laptop fit. Someone packing for a night away needs to see what fits inside. Use the ad and product page to answer that question.

Backpack example

Two reasons to buy a backpack.

One buyer needs a bag for the train. Another is packing for a night away.

THE COMMUTE

Will my laptop fit?

Show measured sleeve dimensions and a fit photo with the exact device.

AN OVERNIGHT STAY

What can I pack?

Show the actual contents packed inside. Record the bag's dimensions.

Where does the click go?

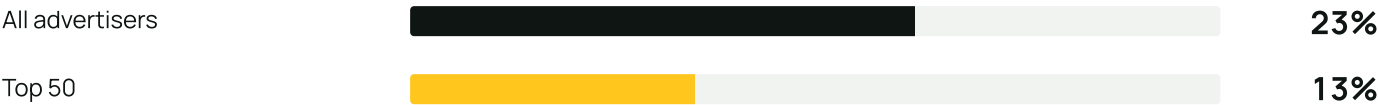

The landing-page data describes what advertisers used. Send buyers to a page that shows the advertised product and answers what they need to know before ordering.

60% of advertisers used five pages or fewer.

In the broader sample, 60% of advertisers used five or fewer landing pages. Among the top fifty by impression share, 63% used six or more. These are separate groups with different denominators.

FOR YOUR STORE

Keep a clear record of which creative and landing page belong to each test. Evaluate the resulting customers using the same cost definitions across channels.

Feature and solution pages led the reported page mix.

The source includes feature, signup, home, product, collection and article pages. The plotted figures are reproduced below with the source’s labeling limitation.

Percent reported; base unclear

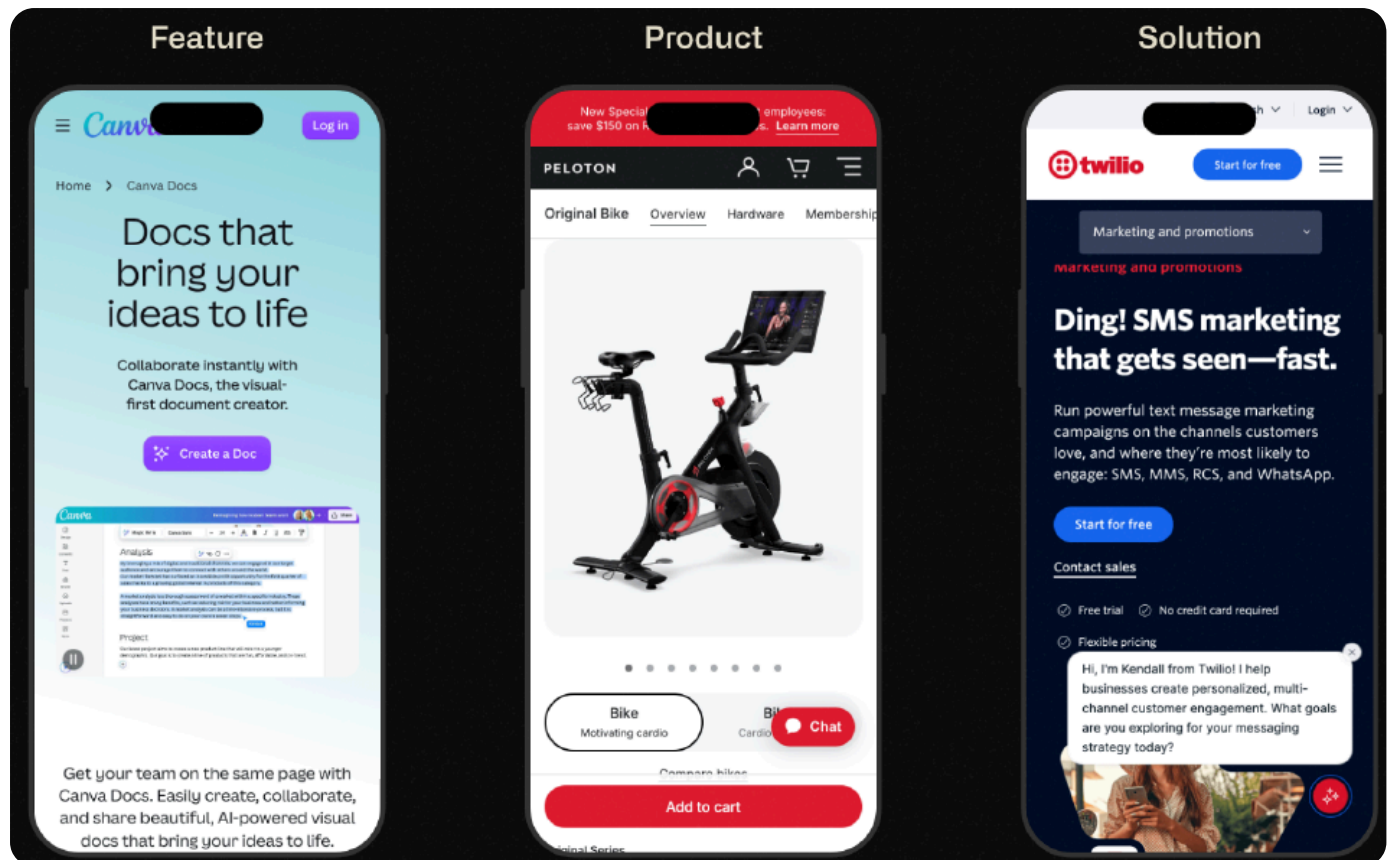

US · July 19 to August 15, 2026Graphite + Similarweb · p. 27

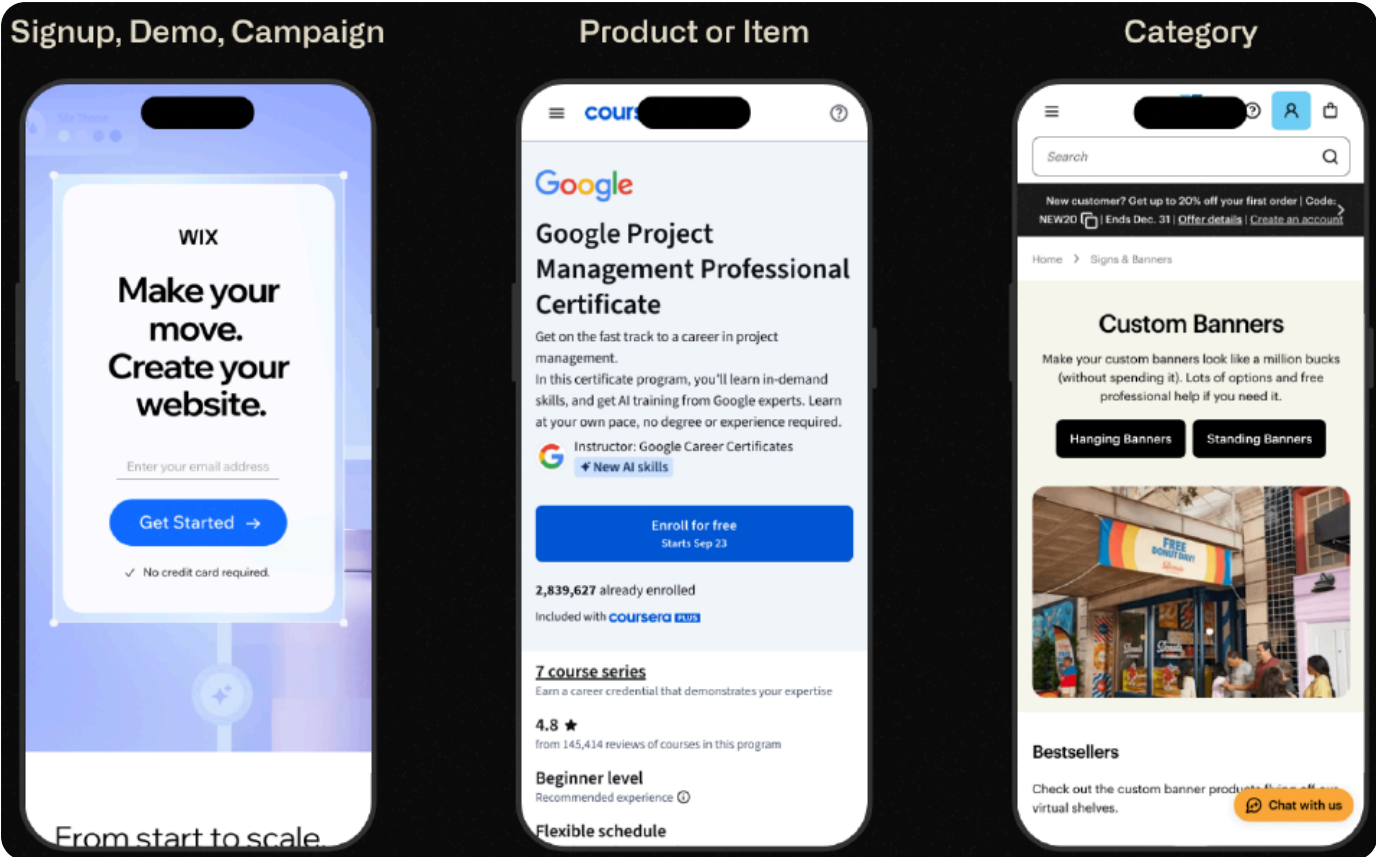

The original headline counts landing pages, while the axis and footnote count advertisers. The report leaves that conflict unresolved, so the 37% cannot safely be read as a share of all landing pages.

The examples span several purchase steps.

The examples include product, signup and collection pages. The table identifies each page and the buying step it supports.

Item	Brand	Subject
Feature	Canva	Docs
Product	Peloton	Original Bike
Solution	Twilio	SMS marketing

Item	Brand	Subject
Signup / Demo / Campaign	Wix	Website signup
Product or Item	Coursera	Google Project Management Professional Certificate
Category	Brand not identified	Custom banners

US · Dates not statedGraphite + Similarweb · p. 29

FOR YOUR STORE

Open the ad's page on your phone. Choose the product options and go through checkout. Fix anything that stops the order before paying for clicks.

Retail and consumer brands had a median of 14.5 pages.

The overall median was four pages per advertiser. Retail and consumer brands had 14.5, compared with one for AI tools and platforms. The number of products you sell matters when reading the pooled figure.

median landing pages per advertiser

US · July 19 to August 15, 2026Graphite + Similarweb · p. 30

FOR YOUR STORE

Use the pages your product range and buyer questions require. Record what each additional page lets you test before paying to build it.

Choose your ad, page and spending limit.

Across ten US advertisers, only 1.9% of ChatGPT headlines matched Google Search exactly. In the 400+ US advertiser landing-page sample, 60% used five pages or fewer. Neither finding tells you what a customer will cost. Start with one product and the amount you can afford to pay for its first order.

1. **Choose the offer.** Write the buyer's situation and the product fact that makes the offer relevant.

2. **Calculate the acquisition ceiling.** Start from net sales and subtract variable order costs. Reserve the amount you need to retain after acquisition.

3. **Connect the ad to its page.** Save the headline, offer and page URL together. Check the product details are visible on a phone.

4. **Set the test budget.** Include separate setup and production costs. Write down the spending cap and who will check it.

5. **Decide when to check the orders.** Allow time for delayed orders and returns. Set the cost limit for continuing, and the problems that would make you pause or change the ad. You may need more orders before deciding.

An attributed order count does not establish how many customers were caused by the ads. Keep that question separate when deciding whether to expand the test.

▼ Research methods and chart notes

▼ Ad-eligible audience reach · p. 8

Chart recreated by RISE DTC from the source values.

Nine markets · September 2026 · Similarweb panel; volume undisclosed

- These percentages count users eligible to see ads. The US figure is 43.4%; the report rounds it to 43% in its headline.

[Read the source page](#)

▼ Worldwide weekly click-through rate · p. 9

Original source figure. Exact point values are not printed on this PDF chart.

Worldwide · March 30 to September 20, 2026 · Similarweb panel; volume undisclosed

- The report gives a 112% relative increase without disclosing the exact calculation. Individual weekly values are not listed in the PDF.
- The companion playbook ends on August 17 and gives a different value for that week. This figure follows the PDF version.

[Read the source page](#)

▼ Click-through rate by market · p. 10

Chart recreated by RISE DTC from the source values.

Nine markets · March 30 to September 16, 2026 · Nine live markets; panel volume undisclosed

- These averages cover the stated measurement window. Ads launched on different dates in each market, so markets have different lengths of observed activity.

[Read the source page](#)

▼ Weekly click-through rates by market · p. 11

Original source figure. Exact point values are not printed on this PDF chart.

Nine markets, plus the combined series · Through September 2026; source date labels conflict · Similarweb panel; volume undisclosed

- The PDF does not list the individual weekly values.
- The caption names five markets, while the legend lists nine. The caption ends the period on September 7; the horizontal axis includes September 14.

[Read the source page](#)

▼ Click-through rate by conversation turn · p. 12

Original source figure. Exact point values are not printed on this PDF chart.

Worldwide · March 30 to August 30, 2026 · Similarweb panel; volume undisclosed

- A turn consists of a user message and its reply. The PDF does not list exact click rates for each turn.
- The report describes 48% higher click rates in the first four turns. This comparison cannot establish that moving an ad earlier would improve its performance, or that advertisers can choose the turn.

[Read the source page](#)

▼ Distribution of ad impressions by conversation turn · p. 13

Chart recreated by RISE DTC from the source values.

All countries · March 30 to August 23, 2026 · Similarweb panel; volume undisclosed

- The first turn accounts for 28% of impressions. Turns two and three together account for 23%, bringing the first three to 51%.
- This chart ends a week earlier than the click-rate-by-turn chart.

[Read the source page](#)

▼ Leading advertisers by impression share · p. 14

Chart recreated by RISE DTC from the source values.

Worldwide · May 4 to September 14, 2026, according to the footnote · Similarweb panel; volume undisclosed

- The chart labels these figures as shares of impressions. Its footnote describes weeks in the top ten, which is a different measure.
- The authors suggest that purchases completed online help explain the advertiser mix. The ranking itself contains no purchase or profit results.

[Read the source page](#)

▼ Advertiser activity patterns · p. 15

Original source figure. Exact point values are not printed on this PDF chart.

US · March 30 to August 17, 2026 · Top 100 US advertisers

- The chart shows the pattern of each advertiser's activity during this period. Exact impression values are not provided.
- The group names describe the observed period. An advertiser labelled "Gone" could have resumed activity later.

▼ Weeks in the top ten · p. 16

Chart recreated by RISE DTC from the source values.

Geography unclear in source · 20 weeks shown; source date labels conflict · 12 advertisers displayed

- The columns preserve the 20-week sequence shown in the report. Exact calendar dates for each column are not supplied.
- The heatmap spans May to September on its axis. Its footnote gives March 30 to August 17 and describes a different measure.
- The footer names the US; the adjacent advertiser ranking is worldwide. The report does not settle which geography applies to this heatmap.

[Read the source page](#)

▼ US advertiser categories · p. 17

Chart recreated by RISE DTC from the source values.

US · March 30 to August 4, 2026 · Top 10,000 US advertisers

- Only selected categories are shown, so their shares do not total 100%.
- The advertiser counts refer to businesses assigned to each category. The size of the user panel is not disclosed.

[Read the source page](#)

▼ Advertiser rankings within categories · p. 18

Expand a category to read its advertiser ranking.

US · March 30 to August 4, 2026 · Top 10,000 US advertisers; nine category panels

- Each advertiser's percentage uses total US ChatGPT ad impressions as the base. The entries within a category therefore do not add to 100%.
- These US rankings use a different market and measurement window from the worldwide leaderboard.

[Read the source page](#)

▼ Brand mentions among exchanges with and without ads · p. 19

Chart recreated by RISE DTC from the source values.

Geography not stated · September 2026 · Similarweb panel; volumes undisclosed

- Among exchanges where an ad appeared, 61% included a brand mention. That figure alone cannot tell you how often a brand mention leads to an ad.
- The report describes this early analysis as directional. It does not establish that mentioning a brand triggers an ad or gives advertisers a competitor-targeting control.

[Read the source page](#)

▼ ChatGPT headlines without exact Google Search match · p. 21

Chart recreated by RISE DTC from the source values.

US · April to August 2026 · 10 US advertisers active on ChatGPT and Google Search

- Across the sample, the report states that 1.9% of ChatGPT headlines exactly matched Google Search headlines. It does not disclose individual headline counts or how the overall figure is weighted.
- The comparison checks exact wording. It supplies no test of whether rewritten or reused headlines convert better.

[Read the source page](#)

▼ Creative variety by impression-share rank · p. 22

Chart recreated by RISE DTC from the source values.

US · April 1 to August 16, 2026 · 400+ US advertisers; rank groups extend to 496

- The source also prints percentages beside the rank groups without explaining how they are calculated.
- Advertisers with more creative also ranked higher by impressions in this sample. The study does not establish whether producing more ads caused that higher rank or improved sales.
